

Week 11: Develop an application that creates notification upon receiving a message.

Android Application that creates an alert upon receiving a message

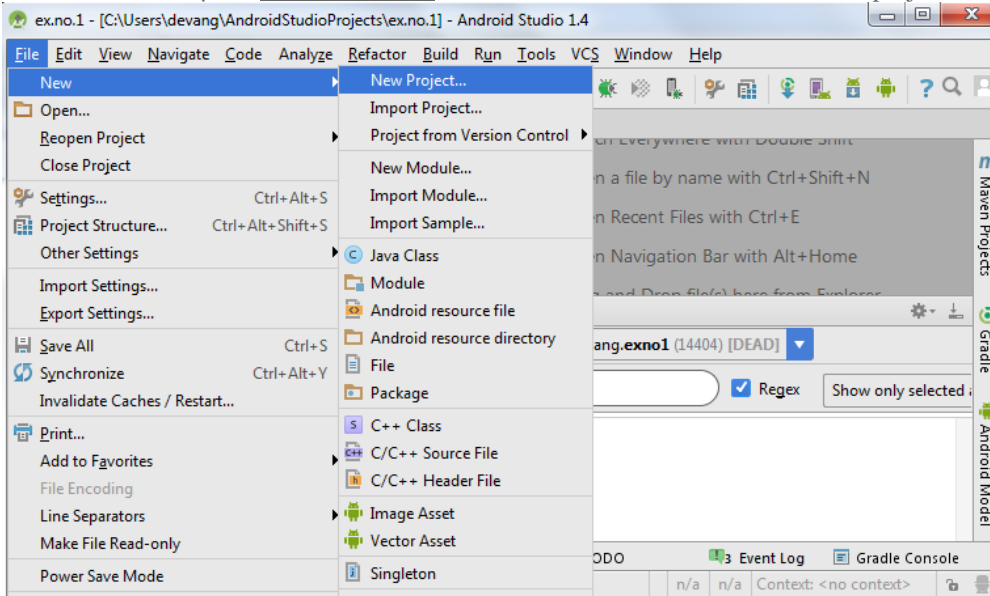

Aim:

To develop a [Android Application](#) that creates an alert upon receiving a message.

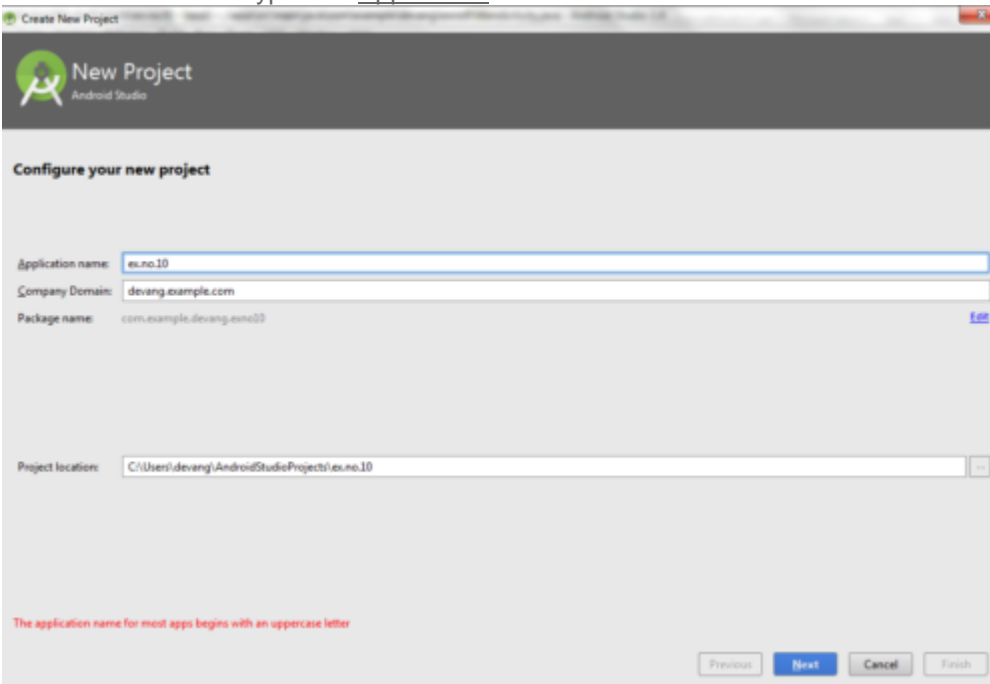

Procedure:

Creating a New project:

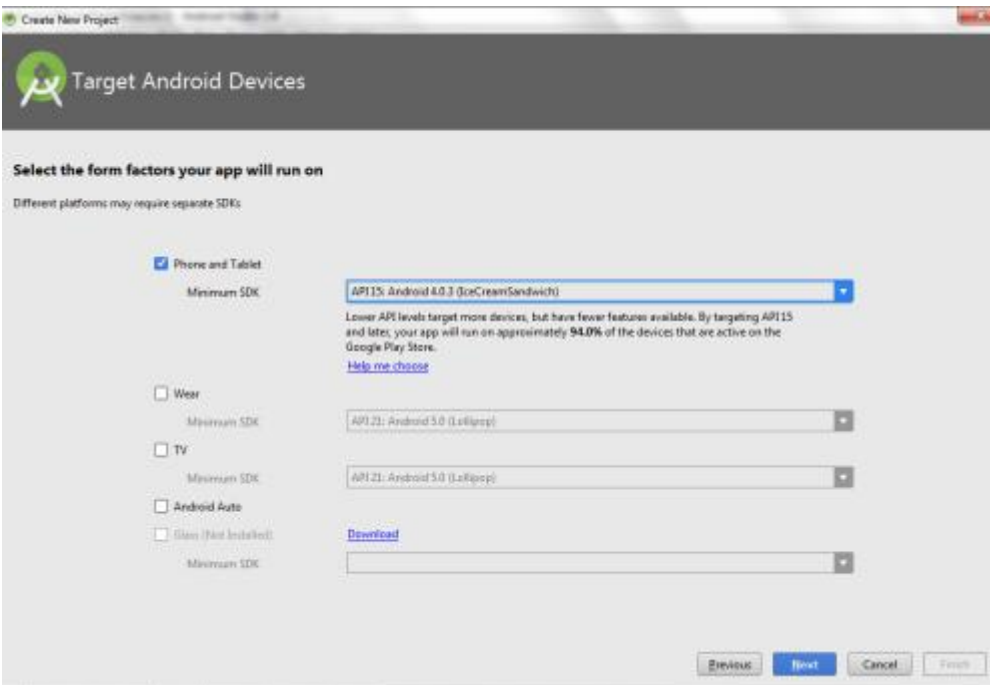

- Open [Android Studio](#) and then click on File -> New -> New project.

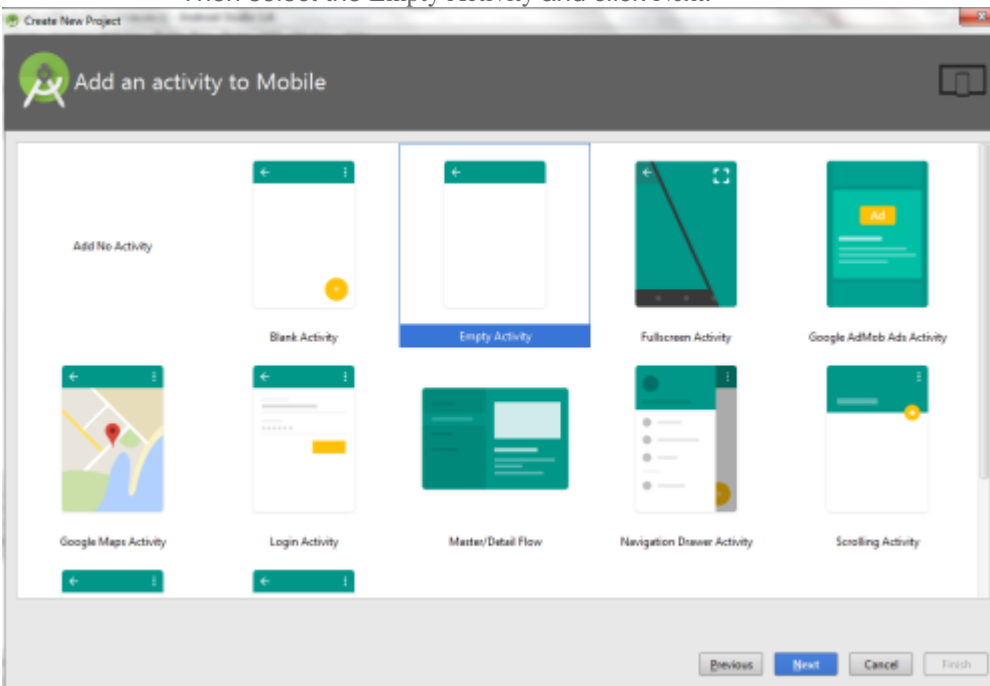

- Then type the [Application](#) name as “ex.no.11” and click Next.

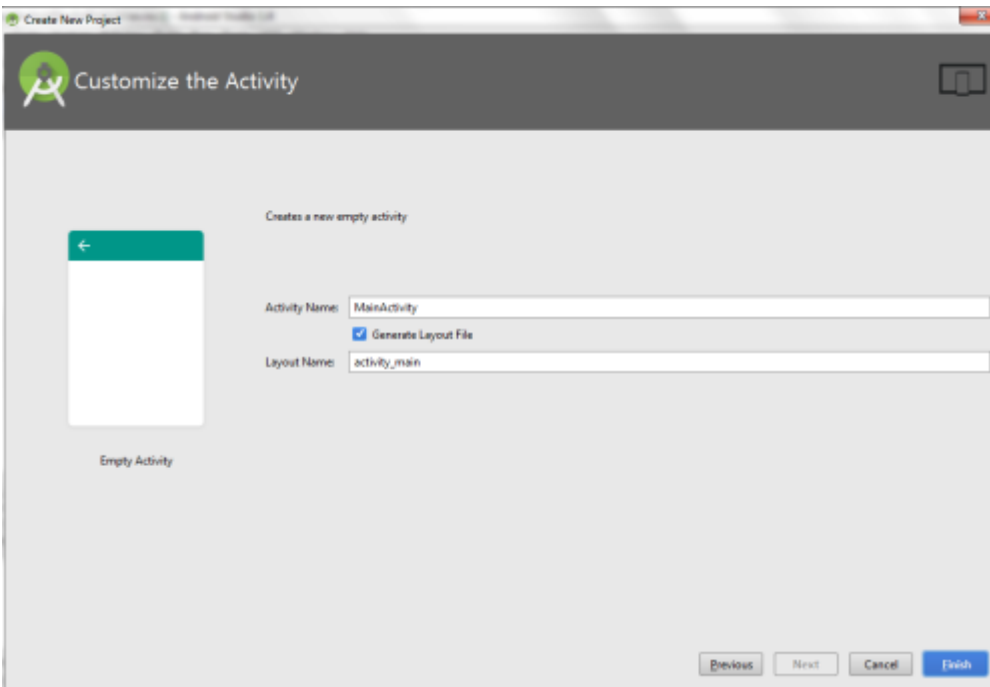

- Then select the Minimum SDK as shown below and click Next.

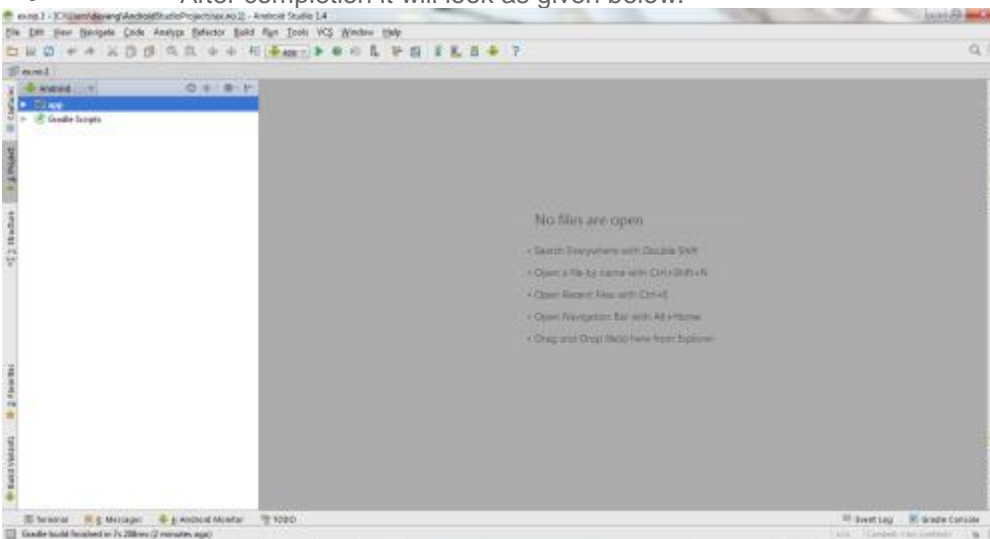

- Then select the Empty Activity and click Next.

- Finally click Finish.

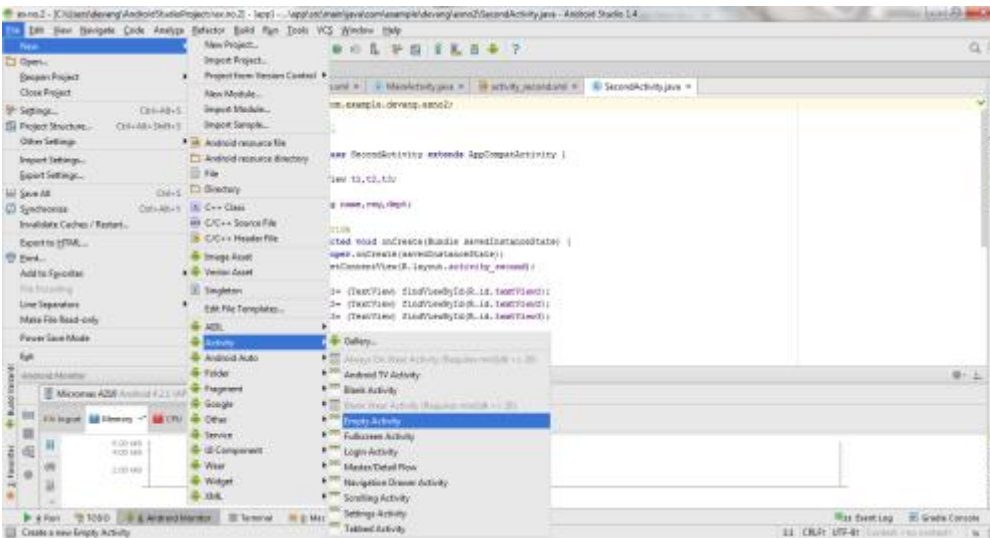

- It will take some time to build and load the project.
- After completion it will look as given below.

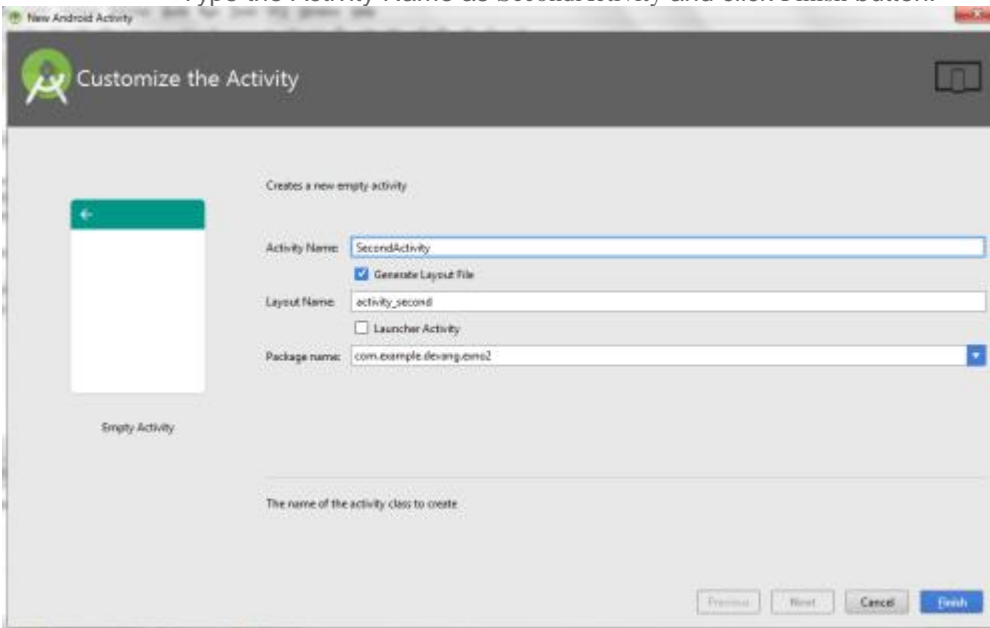

Creating Second Activity for the Android Application:

- Click on File -> New -> Activity -> Empty Activity.

- Type the Activity Name as SecondActivity and click Finish button.

- Thus Second Activity For the application is created.
- Designing layout for the Android Application:

- Click on app -> res -> layout -> activity_main.xml.

Now click on Text as shown below.

Then delete the code which is there and type the code as given below.
Code for Activity_main.xml:

?

```

1 <?xml version="1.0" encoding="utf-8"?>
2 <LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
3     android:layout_width="match_parent"
4     android:layout_height="match_parent"
5     android:layout_margin="10dp"
6     android:orientation="vertical">
7
8     <TextView
9         android:layout_width="wrap_content"
10        android:layout_height="wrap_content"
11        android:text="Message"
12        android:textSize="30sp" />
13
14    <EditText
15        android:id="@+id/editText"
16        android:layout_width="match_parent"

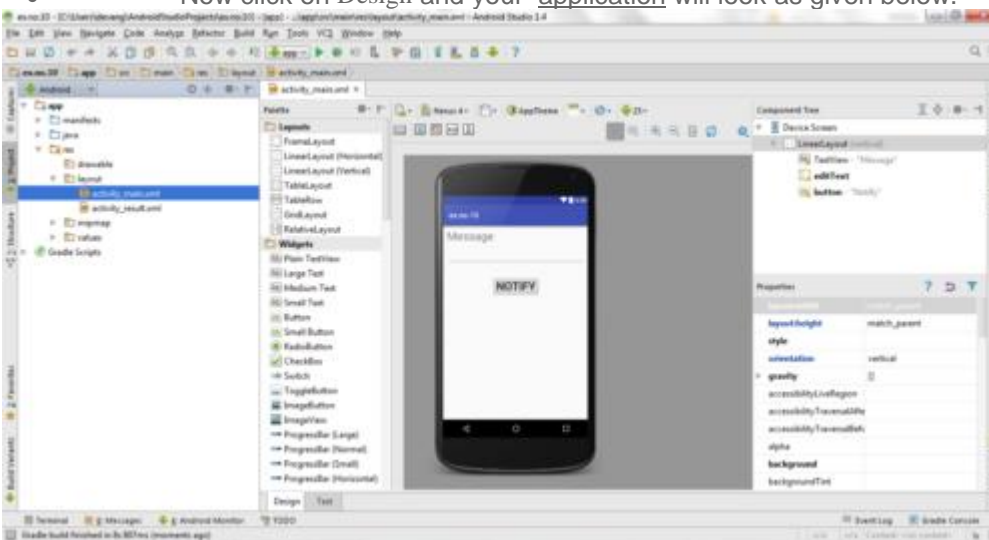

```

```

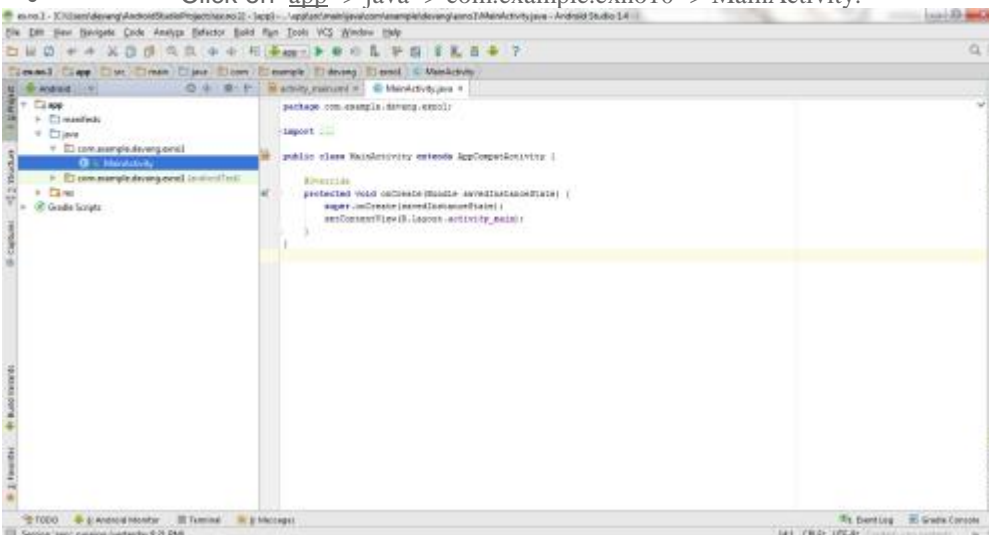

17         android:layout_height="wrap_content"
18         android:singleLine="true"
19         android:textSize="30sp" />
20
21     <Button
22         android:id="@+id/button"
23         android:layout_width="wrap_content"
24         android:layout_height="wrap_content"
25         android:layout_margin="30dp"
26         android:layout_gravity="center"
27         android:text="Notify"
28         android:textSize="30sp"/>
29
30 </LinearLayout>

```

- Now click on Design and your application will look as given below.

- So now the designing part is completed.
- Java Coding for the Android Application:
- Click on `app` -> `java` -> `com.example.exno10` -> `MainActivity`.

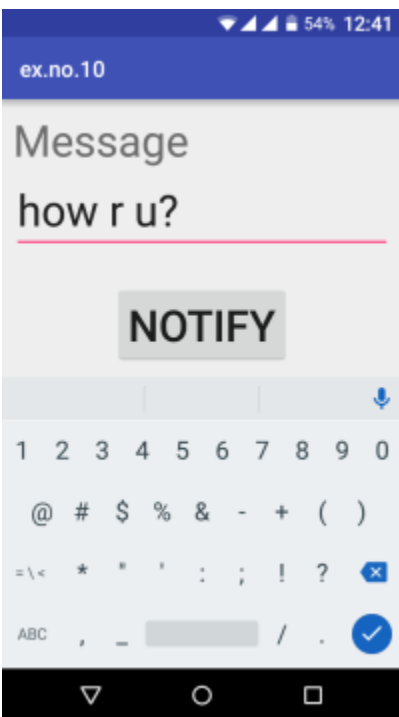

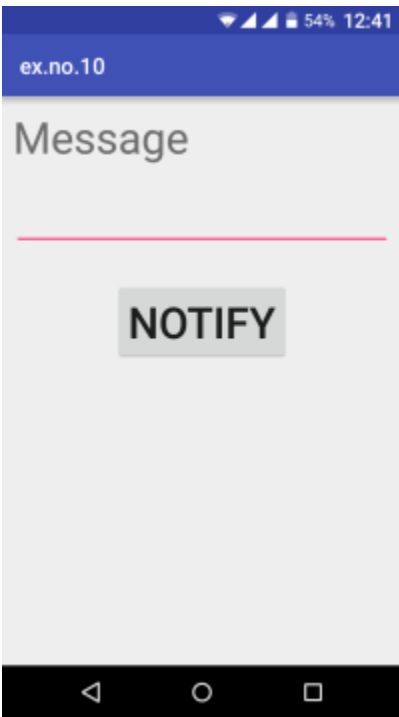

- Then delete the code which is there and type the code as given below.
- Code for MainActivity.java:

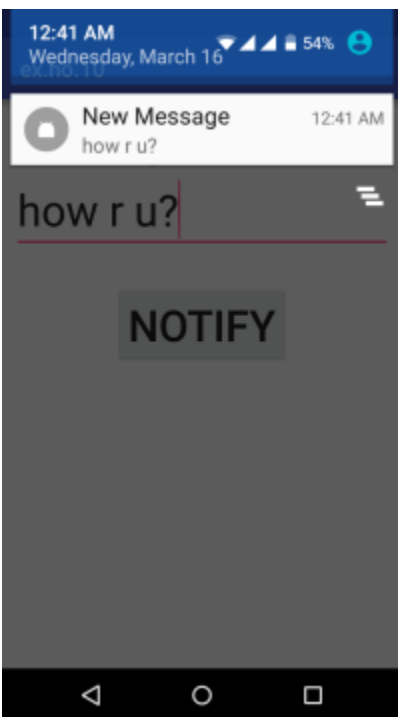

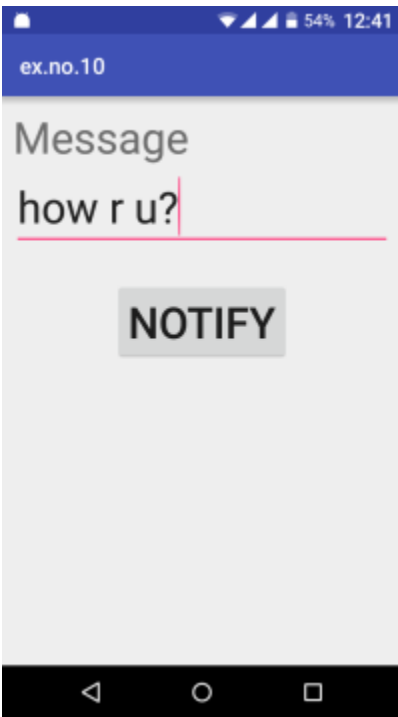

?

```
1 package com.example.exno10;
2
3 import android.app.Notification;
4 import android.app.NotificationManager;
5 import android.app.PendingIntent;
6 import android.content.Intent;
7 import android.os.Bundle;
8 import android.support.v7.app.AppCompatActivity;
9 import android.view.View;
10 import android.widget.Button;
11 import android.widget.EditText;
12
13 public class MainActivity extends AppCompatActivity
14 {
15     Button notify;
16     EditText e;
17     @Override
18     protected void onCreate(Bundle savedInstanceState)
19     {
20         super.onCreate(savedInstanceState);
21         setContentView(R.layout.activity_main);
22
23         notify= (Button) findViewById(R.id.button);
24         e= (EditText) findViewById(R.id.editText);
25
26         notify.setOnClickListener(new View.OnClickListener()
27         {
28             @Override
29             public void onClick(View v)
30             {
31                 Intent intent = new Intent(MainActivity.this,
32 SecondActivity.class);
33                 PendingIntent pending =
34 PendingIntent.getActivity(MainActivity.this, 0, intent, 0);
35                 Notification noti = new
36 Notification.Builder(MainActivity.this).setContentTitle("New
37 Message").setContentText(e.getText().toString()).setSmallIcon(R.mipmap.ic_launcher).setContentIntent(pending).build();
38                 NotificationManager manager = (NotificationManager)
39 getSystemService(NOTIFICATION_SERVICE);
40                 noti.flags |= Notification.FLAG_AUTO_CANCEL;
41                 manager.notify(0, noti);
42             }
43         });
44     }
45 }
```

- So now the Coding part is also completed.
- Now run the [application](#) to see the output.

Output:

Result:

Thus [Android Application](#) that creates an alert upon receiving a message is developed and executed successfully.
